

## CAPTURE ATLAS - DUET™

SKU# **CAP513**

Capture ATLAS™ is a native Windows and Mac OS X application that lets you work with lighting, video, moving scenery, lasers and water jets, and supports a wide range of ethernet DMX protocols like Art-Net and sACN. It also connects directly to High End and MA Lighting consoles as well as consoles that support CITP from brands such as ADB, Avolites, ChamSys and Strand Lighting.

Capture ATLAS™ also plays back local video files, streams video directly from CITP/MSEX compatible and Green Hippo media servers, receives laser projector content from LaserAnimation Sollinger and Pangolin systems and live positioning information directly from Kinesys K2 systems.

Capture ATLAS™ is now a 64-bit application for both Mac OS X and Windows platforms. This allows Capture to use more RAM to accommodate the ever growing production sizes, as well as the use of the latest computer technologies out there, such as SketchUp 2016 support on Mac OS X and moving to video playback and compression based on AVFoundation on Mac OS X and Windows Media Foundation on Windows.

### FEATURES - Capture ATLAS Duet™

- Number of DMX Universes - **2**
- Record, Playback and Render Still Snapshots in High Resolution
- Import Models via SKP, 3DS & OBJ Files with Layers, Groups and Materials
- Full AtlasBase Library with On-Demand Addition of Missing Items
